

# A Component Analysis of Feedback

Denice Rios, Meline Pogosjana, Candice Hansard, & Ellie Kazemi  
California State University, Northridge  
ABAI 2014  
Chicago, IL

# Efficient Training Strategies

- Shapiro et al. (2014)
  - 6/8 participants
    - Self-instructional package
  - 2/8 participants
    - Self-instructional package + feedback

# Efficient Training Strategies

- Shapiro et al. (2014)
  - 6/8 participants
    - Self-instructional package
  - 2/8 participants
    - Self-instructional package + feedback
- Roscoe & Fisher (2008)
  - Trained 8 behavioral technicians
    - Single feedback session
      - Review video and data sheet
      - Corrective feedback
      - Role play

# Efficient Training Strategies

- Shapiro et al. (2014)
  - 6/8 participants
    - Self-instructional package
  - 2/8 participants
    - Self-instructional package + feedback
- Roscoe & Fisher (2008)
  - Trained 8 behavioral technicians
    - **Our feedback package**
      - Review data sheet
      - Corrective feedback
      - Model + strategy

# Feedback Limitations

- Trained professional still required

# Feedback Limitations

- Trained professional still required
- May not be practical in applied setting
  - Interrupt client sessions

# Feedback Limitations

- Trained professional still required
- May not be practical in applied setting
  - Interrupt client sessions
- Identify
  - Most efficient
  - Least intrusive

# Feedback Packages

- Balcazar et al., (1985); Alvero et al., (2001)
  - No conclusions regarding effects of specific components

# Feedback Packages

- Balcazar et al. (1985); Alvero et al. (2001)
  - No conclusions regarding effects of specific components
- Few experimental evaluations
  - Johnson (2013)
    - Objective vs. Evaluative
      - Both needed for maximum gains
- Still need to identifying least intrusive, effective components

# Objective

- Additive component analysis to identify
  - Least intrusive, effective component
- Most efficient procedure when a self-instructional package is not sufficient

# Method

- Design
  - Multiple baseline across participants
- Target behavior
  - Percentage correct implementation
    - Paired-stimulus (PS) preference assessment
- Mastery criteria
  - 90% or above across 2 consecutive sessions

# Method

- Participants
  - 6 undergraduate students
  - No formal training
- Setting
  - Observation rooms with two-way mirrors

# Reliability

- Independent observers
  - In-vivo
  - Videotaped sessions
- Response measurement
  - Total accuracy
  - Target responses

# Procedure

- Baseline
  - Written instructions
- Self-Instructional Package
  - Enhanced written instructions
- Feedback
  - FB1 = rubric
  - FB2 = rubric + performance
  - FB3 = rubric + performance + model/strategy
- Feedback delivered immediately prior to next session

# FB<sub>I</sub>

Dependent Variable	Operational Definition
1. Stimulus presentation	Placed two items on the table in front of the consumer
2. Stimulus placement	Placed the two items 1ft in front of consumer and 1 ft apart
3. Postselection response	Removed the unselected item before recording data
4. Response blocking	Blocked approaches to more than one item or an item that is not in your pool of items by reaching your hands out to the consumer's hands
5. Trial termination	Ended the trial if the consumer did not select an item within 5 seconds after you delivered the verbal prompt

# FB<sub>2</sub>

Dependent Variable	Operational Definition	Correct
1. Stimulus presentation	Placed two items on the table in front of the consumer	Yes
2. Stimulus placement	Placed the two items 1ft in front of consumer and 1 ft apart	No
3. Postselection response	Removed the unselected item before recording data	No
4. Response blocking	Blocked approaches to more than one item or an item that is not in your pool of items by reaching your hands out to the consumer's hands	No
5. Trial termination	Ended the trial if the consumer did not select an item within 5 seconds after you delivered the verbal prompt	No

# FB 3

- Model plus strategies for correct responding
  - Example:

Dependent Variable	Operational Definition	Correct
4. Response blocking	Blocked approaches to more than one item or an item that is not in your pool of items by reaching your hands out to the consumer's hands	No

# Baseline

Percentage of Trials Implemented Correctly

Ben

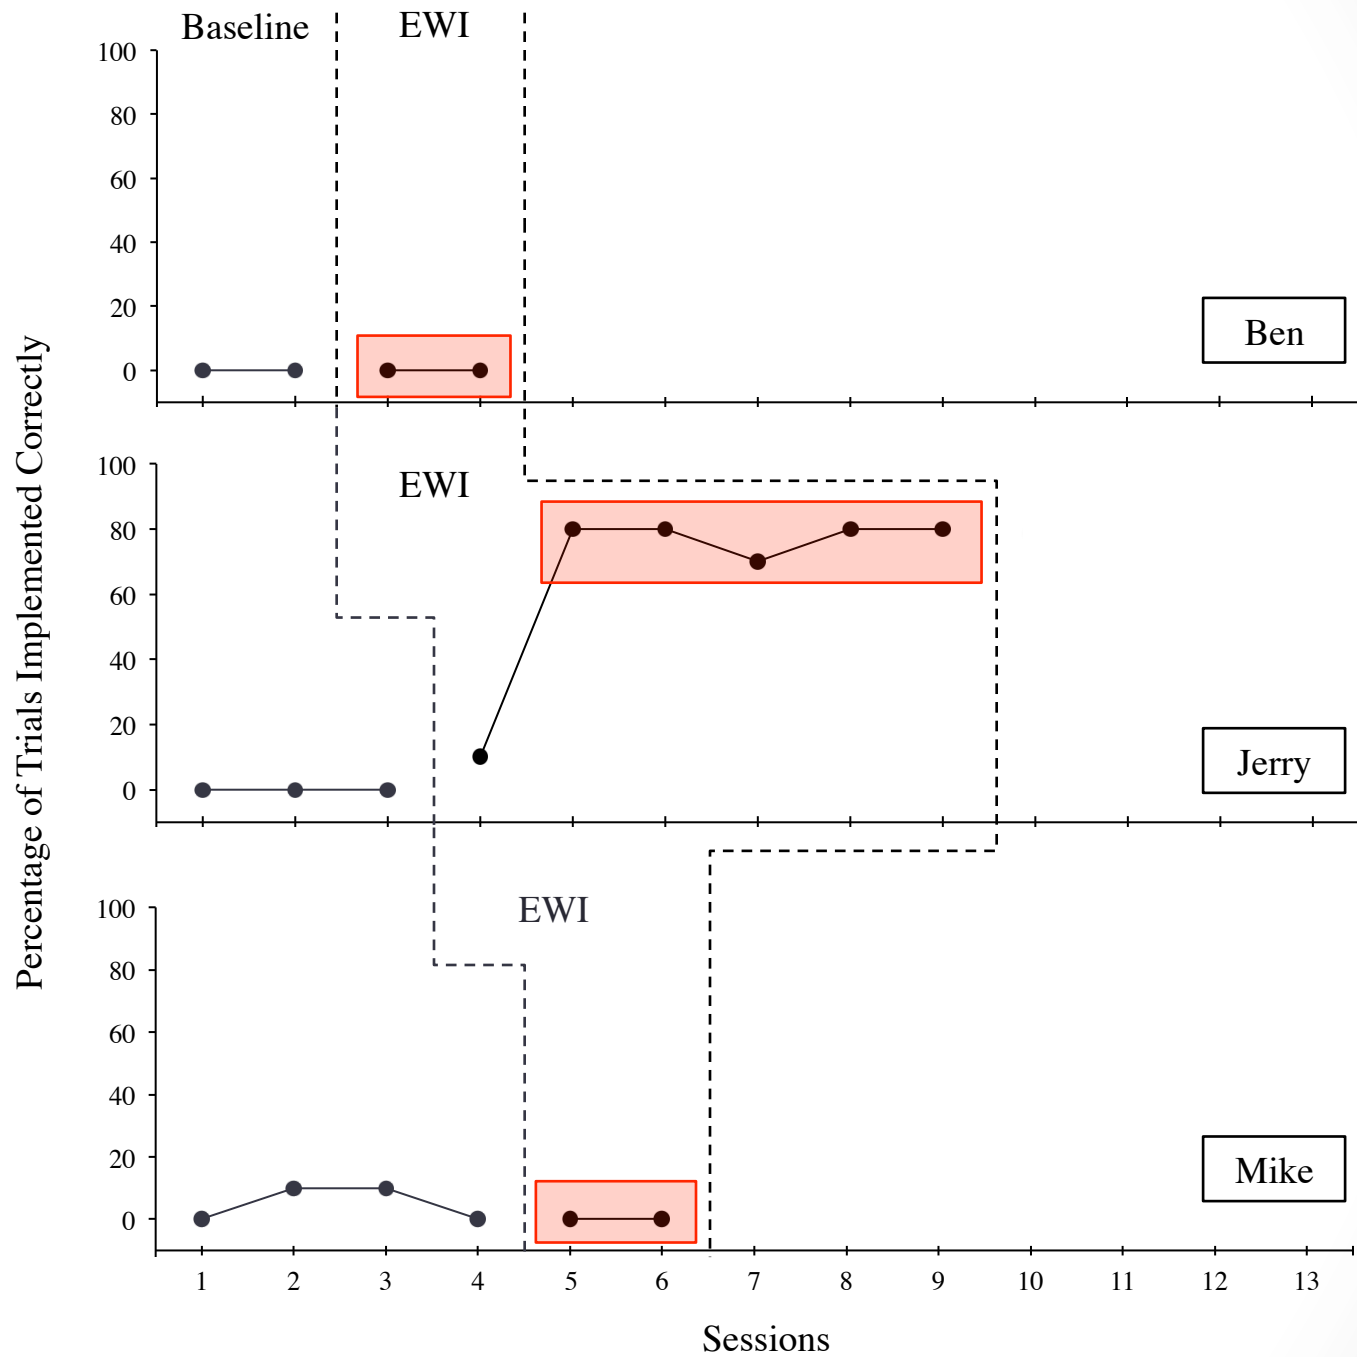

Jerry

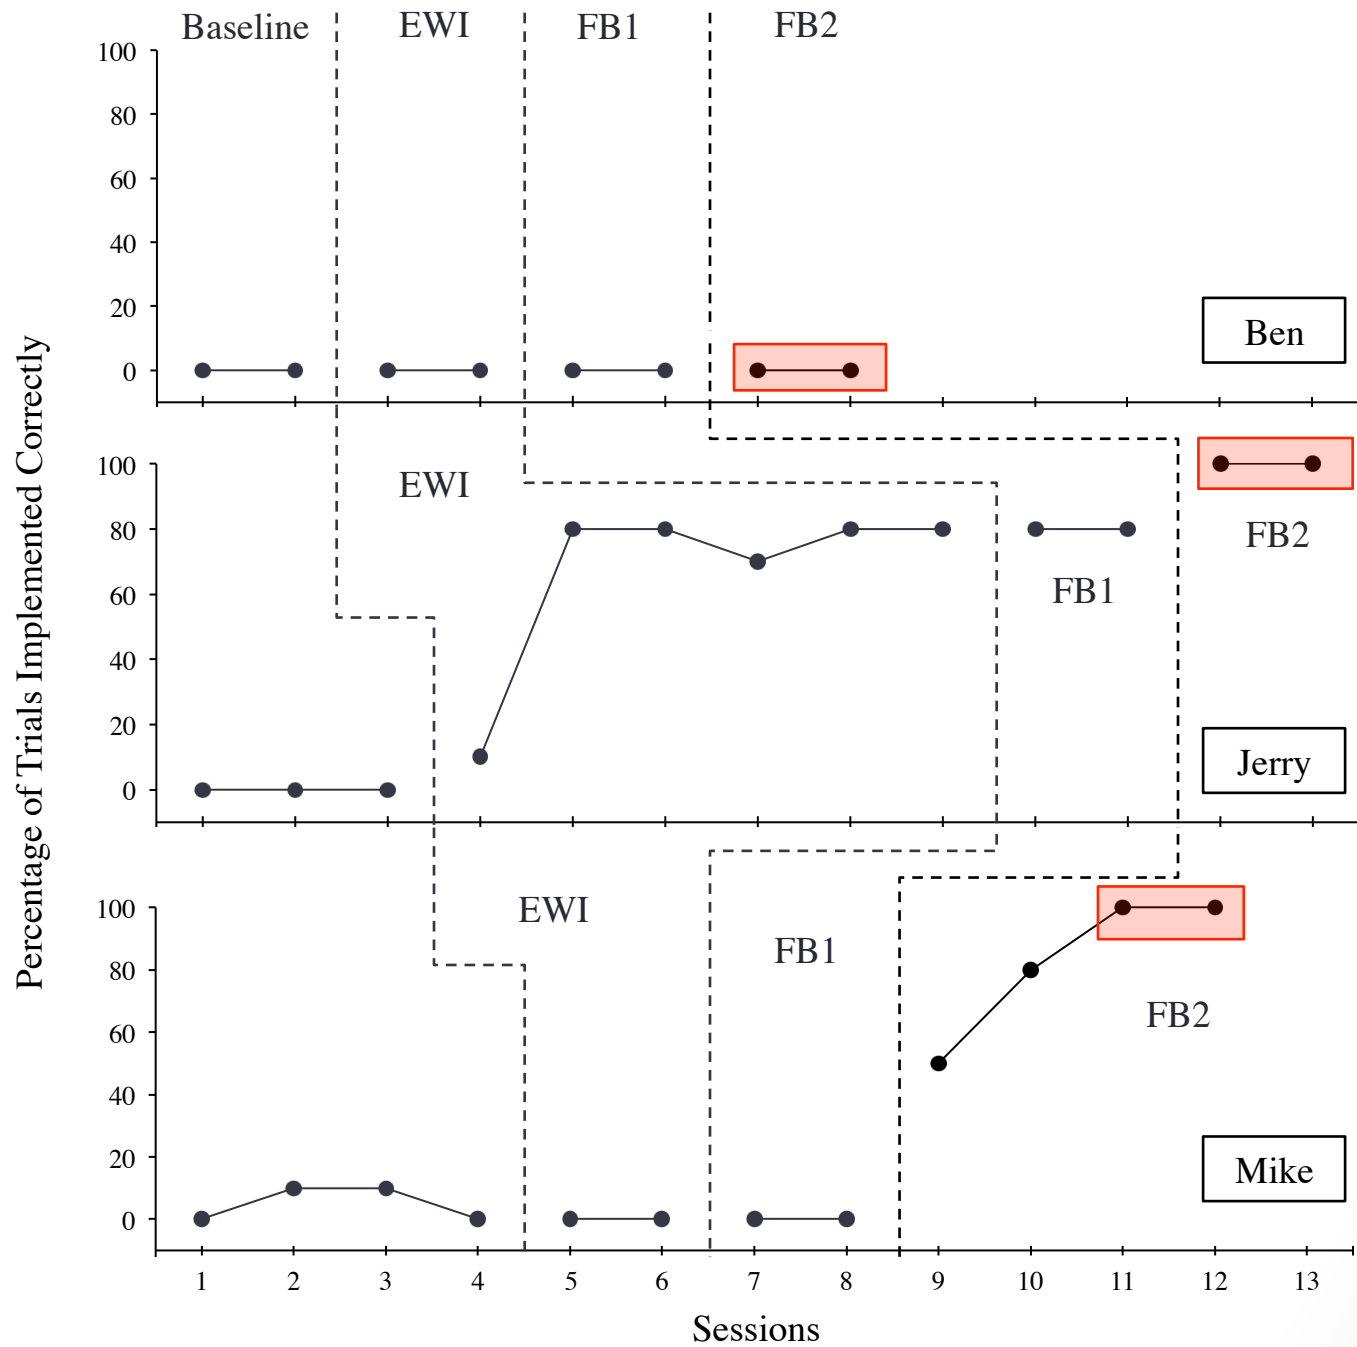

Mike

Sessions

# Results

- FB2 in additive sequence
  - 2/3 met mastery
- FB2 immediately after self-instructional package
  - All met mastery
- When self-instructional packages are not enough
  - Rubric outlining target behaviors
  - Accuracy of performance

# Implications

- Efficiency
  - 2 components

# Implications

- Efficiency
  - 2 components
- Practicality
  - Average session duration = 2 minutes
  - Average sessions to criterion = 3 sessions

# Implications

- Efficiency
  - 2 components
- Practicality
  - Average session duration = 2 minutes
  - Average sessions to criterion = 3 sessions
- No need to interrupt client sessions

# Limitations

- Rubric + performance not effective for one participant
- Self-instructional package sessions were followed by feedback
- Social validity
- Required professional to be present

# Future Research

- Can FB2 be delivered discretely?
  - If so, examine whether in-person delivery necessary
- Evaluate with other procedures
- Continue to conduct component analyses of feedback
